

### Automatic Naming in ImageReady

- If you create rollovers in ImageReady, it can take care of naming your rollover images correctly and consistently when you export your images.
- To set your rollover naming preferences in ImageReady, select **File > Output Settings > Saving Files...**
- Suggested Settings:

### Rollovers in Dreamweaver

- Dreamweaver provides an easy way to add Rollovers to your pages.
- From the menu, select **Insert > Interactive Images > Rollover Image**
- Dreamweaver Insert Rollover Image dialog box:

Field	Description
Image Name	JavaScript name of your image. Just use Dreamweaver's default.
Original Image	The image displayed normally (off state).
Rollover Image	The image displayed when a user moves their cursor over the image (on state).
Preload Rollover Image	This option speeds up the rollover action. Leave this checked.
Alternate Text	Text that's displayed if an end-user does not load the image.
When Clicked, Go To URL	The web page the user will go to when the image is clicked.
